## PROJECT REPORT

## Of

## DALLEY KHORSANI PICKLE

## PURPOSE OF THE DOCUMENT

This particular pre-feasibility is regarding Dalley Khorsani Pickle unit.

The objective of the pre-feasibility report is primarily to facilitate potential entrepreneurs in project identification for investment and in order to serve his objective; the document covers various aspects of the project concept development, start-up, marketing, finance and management.
[We can modify the project capacity and project cost as per your requirement. We can also prepare project report on any subject as per your requirement.]

## DALLEY KHORSANI PICKLE UNIT

## Introduction:

Chilli (Capsicum sp.) is a dicot plant that is self-pollinated and belongs to the Solanaceae family. Chilli had its origins in the tropics of South America. The word "capsicum" comes from the Greek word "kapsimo," which means "to pinch." There are about 25-30 varieties of Capsicum, five of which have been domesticated and cultivated: C. annuum L, C. frutescens mill, C. chinense, C. baccatum L., and C. pubescens. Capsicum is cultivated on 1.5 million hectares around the world, with a total of 10.60 million tonnes. It is cultivated on 0.775 million hectares in India, with an average yield of 1.6 metric tonnes per hectare. 2015, Indiastat.com.

Dalle Khursani is a Capsicum annuum variety. It is primarily cultivated for its pungent fruits in Sikkim and its neighbouring areas, such as Darjeeling. The red cherry pepper (Capsicum annum var cerasiforme), also known as Dalle khursani in Sikkim, is valued for its distinct flavour and pungency. Capsicum is a member of the Solanaceae family and the genus Capsicum. In the open area, the plant can reach a height of $100-130 \mathrm{~cm}$, and in the greenhouse, it can reach a height of $150-180 \mathrm{~cm}$. Red Cherry Pepper pods come in a variety of shapes and sizes, including falling pods, upright pods, yellow pods, and circular pods. Each plant yields 2.5 to 3.0 kg of fruit with 500 to 1000 pods. Under safe conditions, the crop can be cultivated all year.

Sikkim's Dalle khursani is a pungent chilli with many medicinal properties. It's used to make pickle, paste, powder, and dry chilli (chilli may be selected green or ripe for pickling). Dalle chilli produces capsaicin, a pungency-producing agent, as well as carotenoids and phenolic compounds, which are used as natural pigments and antioxidants.

## Uses \& Market Potential:

The Himalayan fireball, also known as Dalle Khursani, is one of the world's hottest chilies. Darjeeling and Sikkim are two Himalayan regions where it is primarily cultivated. Dalle Khursani is one of the hottest chilies found in the Himalayan region, and it belongs to the Capsicum tribe. It has a round appearance that almost looks like a cherry when fully mature, and it is bright red when fully ripe from August to December. It is also a good source of income and livelihood for people in the Himalayan region, costing roughly Rs 200-400 per kilo. It's also well-known for its flavour and fragrance. This Himalayan fireball (Dalle Khursani) is eaten as an Achaar with meal (local language) in every Gorkha family's home in the Himalayan region (Darjeeling, Sikkim). In the Himalayan area, it is known as "Dalle KO Achaar," which translates to "Akbare Khursani." It's easy to figure out that it's also eaten with Momo (dumplings) and Thukpa, a common local dish. Because of its hot and spicy flavour, it is frequently eaten with the famous local dishes Momo (dumpling) and Thukpa. It is common during the cold winter months because it keeps the body warm with its heat. This chilli is processed in an airtight container with salt, mustard oil, and vinegar and can be preserved for several months. Before processing, it is put in a bamboo woven tray known as Nanglo in Nepali and held in direct sunlight for a day or two. It assists in the drying out of moisture as well as the longevity of the pickle for a long time. "Dalle KO Achaar" is usually served with
authentic Nepali cuisine. These closely packed chilli bottles are a hot commodity in the industry, even in small towns. The Himalayan fire ball (Dalle Khursani) is easily found in local vegetable markets and can also be bought along the Himalayan region's roadside markets (Darjeeling and Sikkim).

## Product:

Dalley Khorsani Pickle

## Raw Material:

The main raw material for this industry is Dalley Khorsani.

- Salt: Normal refined white salt is used in chilli pickle. Salt is available easily in local grocery stores.
- Oil: Different edible oils are mainly used in pickle processing. Mustard oil is most preferable oil for pickle processing. Mustard oil is available in local grocery stores or in online platforms also.
- Spices: Different spices like mustard seeds, mustard paste/powder, cumin seeds, coriander seeds, fenugreek seeds, fennel seeds etc. are used according to the variety of taste.
- Preservatives and spices are required for making Quality Pickles.

## Manufacturing Process:

## Area:

The industrial setup requires space for Inventory, workshop or manufacturing area, space for power supply utilities and polishing area. Also, some of the area of building is required for office staff facilities, office furniture, etc. Thus, the approximate total area required for complete industrial setup is $1200-1800$ Sqft.

## Cost of Machines:

| Machine | Unit | Rate | Price |
| :--- | :--- | :--- | :--- |
| Tumbler type vegetable \& fruit washing <br> machine | 1 | 300000 | 300000 |
| Gravity Separator | 1 | 280000 | 280000 |
| Vegetable Slicing Machine | 1 | 80000 | 80000 |
| Kettle Mixer | 1 | 75000 | 75000 |
| Pickle Filling Machine and other | - | 340000 | 340000 |
| Material handling <br> equipment's | 1 | 325000 | 325000 |
| Total Amount |  |  | $\mathbf{1 4 0 0 0 0 0}$ |

Power Requirement- The estimated Power requirement is taken at 20 HP .

Manpower Requirement-Following manpower is required:

- Machine operator-2
- Skilled/unskilled worker-3
- Helper-4
- Manager cum Accountant-1
- Sales Personnel-2

## Assumptions:

1. Production Capacity of Dalley Khorsani Pickle unit is taken at 300 KG per day. First year, Capacity has been taken @ $30 \%$.
2. Working shift of 10 hours per day has been considered.
3. Raw Material stock and Finished goods closing stock has been taken for 10 days.
4. Credit period to Sundry Debtors has been given for 14 days.
5. Credit period by the Sundry Creditors has been provided for 15 days.
6. Depreciation and Income tax has been taken as per the Income tax Act,1961.
7. Interest on working Capital Loan and Term loan has been taken at $11 \%$.
8. Salary and wages rates are taken as per the Current Market Scenario.
9. Power Consumption has been taken at 20 HP.
10. Selling Prices \& Raw material costing has been increased by $3 \%$ \& $2 \%$ respectively in the subsequent years.
